

Center for Transportation Technology

The transportation industry in Georgia is in significant need of qualified, work ready employees with predictions that this need will only increase with time.

With a significant shortage of truck drivers, diesel technicians, and sales staff, transportation and logistics companies report that their only obstacle to growth is filling key positions. With the fourth highest percentage of employees over the age of 55 of any industry, transportation technology fields can provide well-paying, long term careers for qualified graduates.

Chattahoochee Technical College is prepared to provide the education men and women in our community need in order to be successful in this industry and secure positions with our partners in the transportation and logistics industry.

To accomplish this goal, Chattahoochee Tech seeks funds to launch the Center for Transportation Technology at our North Metro and Marietta campuses.

These centralized locations, each strategically located within minutes of major interstate highways, will provide for higher levels of collaboration between academic programs to better serve students in the Automotive Collision Repair, Automotive Technology, Commercial Truck Driving, Diesel Equipment Technology, Logistics and Supply Chain Management, and Motorcycle Service Technology programs.

**Funding Opportunities for the
Center for Transportation Technology -
\$2,700,000**
