

[Meredith Muse] So, I wanted to approach this video as a 'get to know our program.' [Thomas Logan] So, the film video production technology at Chattahoochee Tech is located at the Mountain View campus. So, this is the only campus in Chattahoochee Tech that has the studio setup, the production switcher, the equipment to teach this program. [Meredith Muse] So, we have two tracks that students can choose from when they're in the program. One track is for studio production, where they're gonna be learning a lot more multi-camera live production. And the other track is a film production track. And in that case they would be taking a narrative film-making class and a documentary filmmaking class, really to extend on those skills for longer format. [Thomas Logan] We try to give them a broad background. Anything from doing a production switcher to what we call intermediate and intro to multi-camera. [Meredith Muse] All of our FVPT students start out taking the same core classes. So everybody's gonna get practice and learn some skills in graphics for television and film, for post-production, for production. So, anything kind of working with cameras. The film and video production program has a diploma that students can take those core classes and then a few of the electives. And then we also have an associate's degree. And that's where students are going to decide on that track, either the studio production track or the film track. And on top of that, we have several embedded certificates that students can achieve along the way.

students can achieve along the way. [Thomas Logan] This program, the way it was designed and really the only way you can teach it, is a lot of hands-on instruction with the instructors, and that's what we're all about. [Meredith Muse] For more information on the program, students and prospective students can visit our website. We've got a lot of great information on there as well as a couple of links that might be of interest. [on screen text] Chattahoochee Tech
